

PRODUCTS GUIDE

TERAL

Listen to the voice of the times and regard the global environment from a deeper and broader viewpoint

Since its foundation, the Teral Group has constantly responded with advanced technologies and quality to the changing times and the needs of our customers.

As specialists in the water and air that are vital to a beautiful planet, we are committed to developing products that show concern for the movements to protect the environment.

A deeper and broader viewpoint. Our proven track record is evidence of the trust placed in the Teral brand, both in Japan and overseas.

Triple e – the new product concept at Teral

The Top Runner Program aimed at energy-efficient electric motors was introduced in April 2015. At Teral, we are developing products that comply with the new regulation under the Triple e concept.

High **e**fficiency products realize

saving **e**nergy and preserving the Earth

environment

The Teral Group

- **TERAL INC.** Manufactures and sells pumps, fans, units, environmental systems
- **TERAL TAKU INC.** Manufactures small-scale pumps, built-in pumps
- **TERAL KURITA INC.** Manufactures fans for industrial, equipment and agricultural use
- **TANIYAMA CO., LTD.** Manufactures fans for industrial, construction and air-conditioning use
- **TERAL TECHNOSERVICE INC.** ... Maintenance & Engineering
- **Overseas** Teral Asia Limited / Teral Thai Co., Ltd. /
Teral General Machine (Shanghai) Co., Ltd. / Teral Middle East F.Z.C. /
Teral Pumps & Fans North America Ltd. /
Teral Vietnam Limited Liability Company /
PT. Teral Indonesia Pumps and Fans / T&W / Teral Philippines Inc.

Coolant filtration equipment

A complete lineup for a range of need in daily life and on the production floor

Air-conditioning, water supply and drainage are some of the indispensable facilities for a comfortable environment in apartment buildings and office buildings. Technical progress toward better efficiency and energy conservation is in constant demand at all types of production sites. The Teral Group understands the characteristics of different sites and pays close attention to product development. We are proud of our extensive lineup that responds to customer needs.

For the construction market

Pump Line up

Although we may not notice them, pumps support our every day lives. Leading-edge technology and uncompromising product quality control provide answers to today's changing needs.

Water supply pumps

Powerful, yet designed to save space and energy.

High-performance pumps with excellent durability and workmanship support safety in daily life.

Direct connection water supply booster pumps

Fan Line up

Fans have come to play an indispensable role in today's ever more complex urban environments. Our varied line-up of high safety products help to maintain comfortable environments in a number of ways.

Air-conditioning fans

We have a varied lineup from centrifugal fan for low & high pressure, axial fan that can be installed between ducts, and engine drive to respond to a range of need.

Sirocco fans (Multi-blade fan)

Single inlet belt driven
straddle mounted impeller type

CLF5-RS
CLF6-RS

Single inlet belt driven overhang type

CLF2-OB
CLF6-OB

Single inlet direct driven type
without coupling

Environmental Systems

Purification and recycle of waste water is now one of the most priority issued of the urban life. We hope to promote a sustainable recycling society by taking a total approach to preserving the future of the environment.

Water treatment systems

Providing filtration equipment and chemical liquid injection device for various applications such as baths, pools, landscapes, well water, and rainwater, we will respond to individual needs by custom design.

Filtration equipment

Sand filtration
BSF

Sand filtration
MSF3

Sand filtration
TDT2

Cartridge filtration
PFF

Hair catcher
Strainer type
HC

Iron and Manganese removal device

TDTM

Chemical dosing equipment

PTS

Coolant filtration equipment

Providing a lineup of coolant filtration equipment for cutting and grinding applications, we will respond to individual needs by custom design.

For cutting

Drum filter type **CyClean® TDF/TDFN**

Efficient system for recovering floating oil

Designed to prevent sludge accumulation **Patented**

- Drumfilter provides reliable, highly accurate filtering
- Uses newly developed, high strength filters
- Filters can be replaced without removing liquid

3D illustrations of streamline

Drum filter is easily replaced.

Options

Can be replaced with a range of filtration systems in case of need for even more precise filtration.

Total heat exchanger

Total heat exchanger is a way to reduce the ventilation load. We offer a wide range of products from small to large air volumes to respond to individual needs by custom design.

Floor embedded type

EU

Kitchen garbage disposal systems

Raw garbage disposal systems reduce garbage into a powder using a disposer, purity it in a treatment tank and discharge it into the sewer system. Today such systems have attracted attention for their ability to eliminate the odors and hassle of treating raw garbage while helping to conserve the environment.

Disposers

As raw garbage can be simply placed in the disposal system and crushed with the disposer at the push of a button, it greatly reduces the burden of garbage accumulation and collection. These systems have quickly achieved widespread adoption in places such as stylish high-rise apartment buildings and commercial applications requiring hygiene control.

New disposer employing the industry's first jet flush system

Garbage collection points can be kept small, preventing crows, stray cats or other animals from being attracted to the site.

The amount of garbage that has to be taken out is cut in half, greatly helping housewives and the elderly.

Eliminating the smell of kitchen garbage and leaks from garbage bags helps keep the elevators and stairs clean.

Released into public sewer mains or high-level domestic wastewater treatment tank

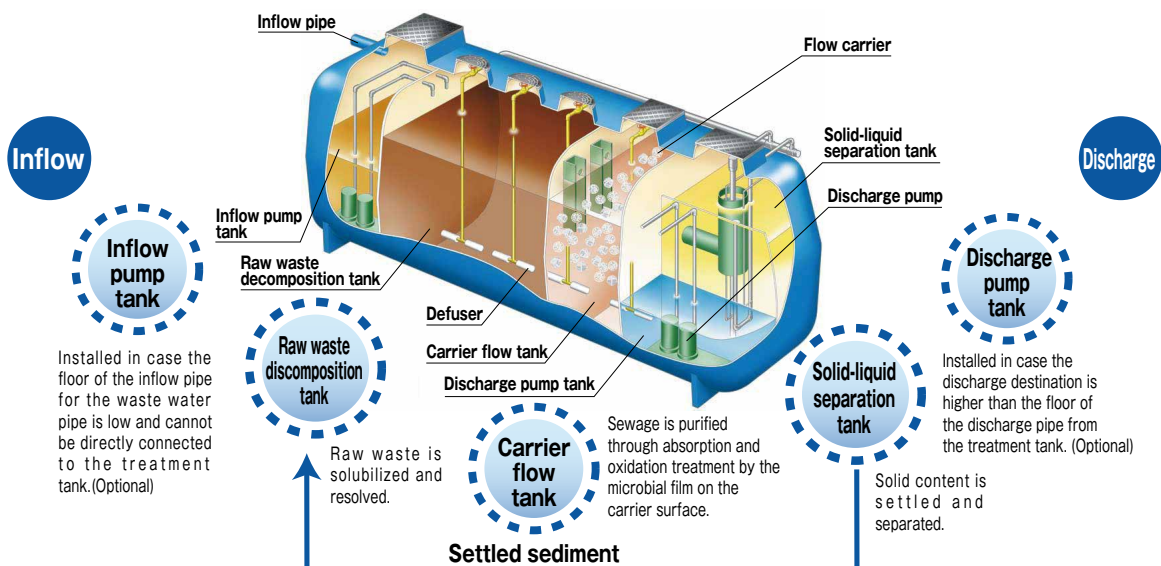

Exhaust pipe/Exhaust fan

Disposer

Waste water pipe

Machine room

Waste water treatment tank

Reuse of waste water systems

Substitute clean water is produced by purifying the organic materials present in waste water using microorganisms, and reusing the water after filtration and sterilization. Wastewater reuse systems utilize this water as an intermediate water supply for applications such as toilets and fire fighting. Today the conservation of recycling-oriented water resources has attracted considerable attention from various quarters.

Pretreatment system for kitchen waste water

BT BioClean

This system purifies wastewater from kitchens, which contain highly concentrated organic pollutants and oils, to bring it up to the standards required for release into the public waste mains. Instead of the existing pressurized flotation separation system by using our unique organic treatment method called BT BioClean, a separate treatment process for sludge and scum is no longer required. This system has won greatest praise from our customers.

Solar battery pump system

This environmentally-friendly pump system runs on solar energy

- ① Clean energy production as light converted directly into electrical energy
- ② Uses renewable solar energy
- ③ No external power source required. Can be installed in any location.
- ④ Environmentally friendly, zero emissions of greenhouse gas (CO₂)
- ⑤ Using submersible pumps results in extremely low running noise

Rooftop greening system

Rooftop greening systems have drawn attention as a possible solution to the heat island effect of major cities. By combining bamboo charcoal with a rainwater collection and circulation system unique designs can be created without sacrificing ease of maintenance.
